```
% Open Image Labeler
% Make pixel labels, e.g., "NotEye" and "Eye"

% Import image from file (Label tab).

% Label all pixels as "NotEye": click on NotEye, then shift-click image.
% Select "Eye" pixel label and use tools (e.g., brush) to select pixels.

% Under Label tab, save session and export labels to file.
% See subdirectory PixelLabelData.
% Categorical matrix is in png format as Label_#.png.
% Largest # has a png matrix of the same size as the original image.
% Background == 2; Eye == 1;
```

```
% View original image:
